Tent Safety

- Tents to billet p[illegible] unit equipment/supplies
  will be set up in rows with a 2-meter clearance on all sides.

- A 9-meter clearance must be kept between a double row of
  tents and any other row of tents with frames.

- Tents must be set up away from roads and trails.

- Tent areas must be level and free of potholes, sharp rocks,
  and other hazards.

- Petroleum, oils, and lubricants (POL) storage areas will not
  be located within 50 feet of tents. When possible, POL storage areas must be located at a lower elevation than

  bivouac areas.

Tent Safety

- **Tents must be secured against high winds.**

- **Tent ropes should not be crossed. In addition, tent stakes and ropes should be marked with engineer tape to preclude tripping hazards.**

- **Walking paths between tents must be planned and established.**

- **Camouflage nets must not touch space heater stovepipes in tents.**

- **Stovepipe flaps must be rolled back and secured before stoves are operated.**
